

Orange Spiral Wrap

Portable Earthing Devices protect workers from accidental energisation, and their bright orange insulation signals that earthing is installed and must be removed before re-energising.

UV exposure can fade this orange insulation, reducing visibility in the field.

Betacom Earthing Orange Spiral Wrap restores the high-visibility orange on faded earthing leads.

The durable wrap is applied over existing conductors, improving identification without replacing serviceable equipment.

It's an effective way to maintain the visibility required for safety-critical earthing systems.

- Restores visibility of UV-faded portable earthing conductors
- Bright orange colour improves recognition of installed earthing leads
- Helps workers identify portable earthing equipment before re-energisation
- Fast and simple field installation
- Can be applied to existing conductors without disconnecting hardware
- Abrasion resistant polypropylene construction
- Flexible design allows easy wrapping around cables and leads
- Cost-effective alternative to replacing complete earthing leads
- Suitable for refurbishment of portable earthing equipment

Technical Specification

Material	Polypropylene	Length	1m
Colour	Orange	UV Resistance	Suitable for outdoor use
Nominal wrap diameter	22mm	Compatible conductor size	147mm ² AL Class 5
